

FIGURE 2. Average forecasts across trained and untrained forecasters for different outcome realizations. The average forecasts of trained forecasters were significantly lower than those of untrained forecasters for events that did not happen ($t=6.83$, $p<0.01$ for a one-tail t-test). The average forecasts of trained forecasters were significantly higher than those of untrained forecasters for events that happened ($t=1.41$, $p<0.08$ for a one-tail t-test).
